

## Site Partnerships

For more than 15 years, Investigator Support Services (ISS) has been enhancing site visibility and helping investigators secure additional drug and device studies in virtually all therapeutic areas. Your staff can devote more time to research as we identify new clinical trials matched to your interests.

### Benefits of Partnership

Targeted marketing efforts coupled with existing relationships with hundreds of key site selection personnel put your site information in the hands of major pharmaceutical companies and contract research organizations (CROs). Independent research sites gain access to as many as 300 new protocols each year, allowing investigators to expand their research experience and choose the trials that best meet their needs.

#### Supplement Your Research

Select from a diverse range of Phase I-IV drug and device studies in your preferred indications. We will match sponsors' criteria to your site's capabilities and medical specialties, providing a steady stream of trial opportunities tailored to your research interests.

#### Retain Your Independence

Continue existing business development practices while you evaluate and choose which studies to pursue. Our non-exclusive partnership supports site autonomy while expanding your selection of research opportunities. Once selected for a study, you will negotiate budgets and contracts directly with the sponsor or CRO.

#### Site-Friendly Payment Terms

Whether research sites outsource their business development services or utilize internal staff, the allocation of resources is necessary for growth in the industry. ISS has developed site-friendly terms to meet your financial needs, giving you the freedom to contract on a study-by-study basis with nothing due until you receive payment from the sponsor.

### Joining Our Network

Joining our site network is risk-free; it costs nothing to review information for new clinical trials and pursue studies of interest.

- Complete our online Site Inquiry Form or submit your contact information via fax at 773.278.2935.
- One of our Site Relations representatives will be in touch to discuss registration and gather information for promoting your site to sponsors and identifying studies in your areas of interest.

### Contact Us

We encourage you to consider Investigator Support Services as a source for additional clinical trials. To discuss your study needs, contact us at 773-278-1567 or findstudies@researchsite.net.
